

Fusion ePCR

Ortivus Pre-Hospital Reporting Software

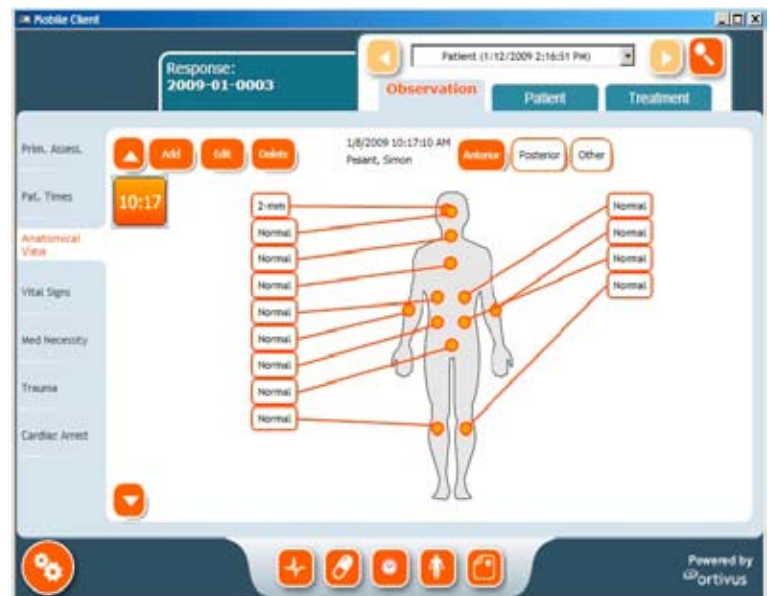

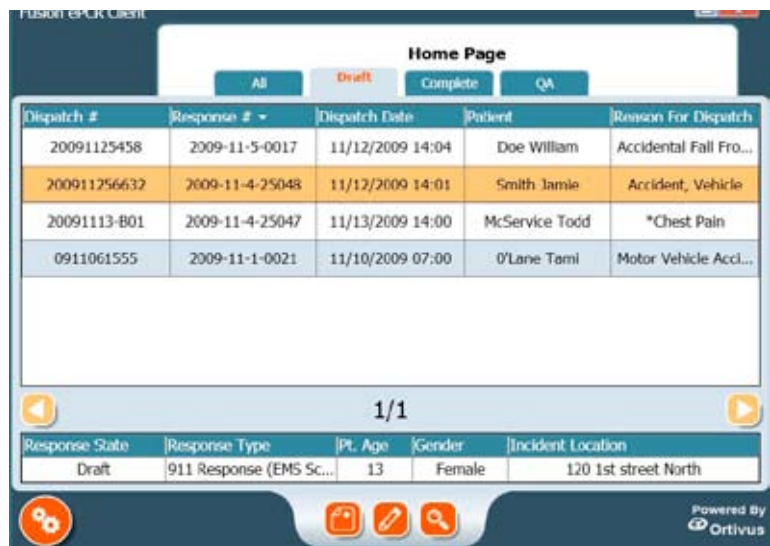

The new Ortivus Fusion ePCR provides patient caregivers with the electronic means to facilitate an efficient and streamlined data collection process to quickly produce accurate and complete electronic patient care reports.

Features:

- Touch Screen Navigation
- Attach Photos and Documents
- Configurable Layout
- Decision Support
- Customizable Documents
- Encrypted Patient Database

Benefits:

- Fusion ePCR and Sweet-Billing can reduce the time between patient transport and claim submission.
- Integration with numerous State Required Data Element Sets (Run Sheets).
- System configuration and user interface increases speed of data entry.
- Link between Primary Provider Impression and Protocol ensures timely access to pertinent treatment information.
- User friendly design and many deployment models fit where you collect pre-hospital data.
- A friendly touch-navigated user interface increases speed of adoption by staff and reduces training time.
