

# New Ortivus Fusion ePCR vs. Sweet-Field Data

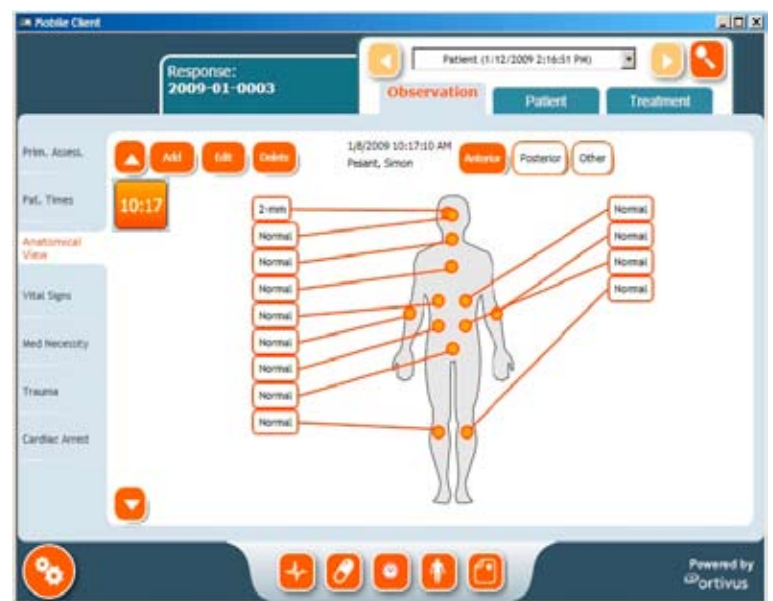

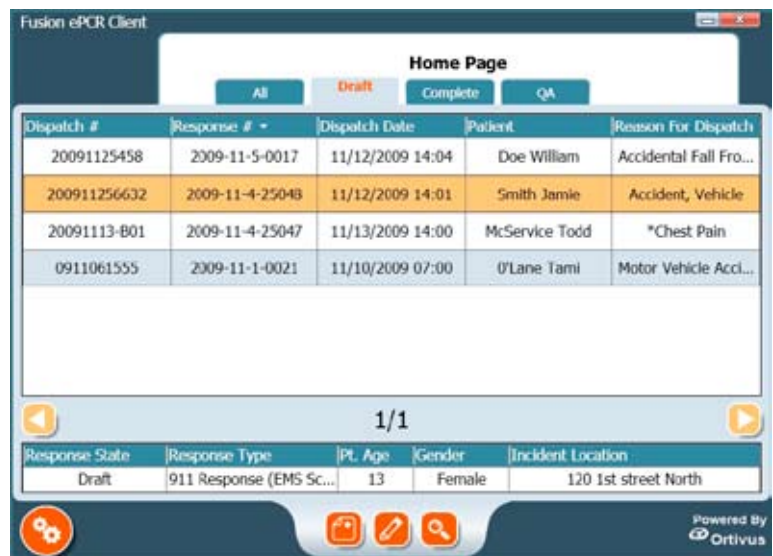

*Fusion ePCR is a pre-hospital EMS incident documentation and data integration system that will provide patient caregivers with the electronic means to streamline the collection of pre-hospital EMS incident data both in the field and in the office. The system produces a complete, accurate, and legible electronic patient care record, thereby reducing liability as well as improving the quality of patient care and reimbursement.*

## Features of New Fusion ePCR:

- Encrypted patient data
- Document in vehicle, on-scene, at the destination or station
- Configurable layout
- No need for addendums; changes to completed reports are logged to history
- Separate Response type and Patient Disposition types
- Customizable documents
- Attach photos and documents to responses and patient encounters
- Patient's past medical history defaults into the patient encounter
- Decision support - ensure timely access to pertinent treatment information
- Active directory support
- Arrange custom fields on Responses and Patient Encounter where pertinent
- QA Module

## Transition from Sweet-Field Data to New Fusion ePCR:

- Minimal impact on staff training; keep much of your existing patient data and system codes.
- Minimal impact on reimbursement with a full integration with Sweet-Billing.
- Minimal impact on receiving facilities; printed patient care report has the same look and feel as Sweet-Field Data; or contact Ortivus Professional Services for a custom PCR.
