

Supercharge your system with the ProQA Interface for Sweet-CAD

Reduce your risk and improve your customer confidence

There are many factors to consider in making the best dispatch decisions. Empower your emergency dispatchers to make the best possible decisions with the integration of ProQA® and Sweet-CAD.

Here's what it means for you:

- **Risk Management** - protocol helps reduce human errors, which lower risk.
- **Customer Confidence** - knowing that the *best* possible systems are in place to make the *best* dispatch decisions instills customer confidence that their health and safety are in the *best* hands possible.
- **Quality Improvement** - with protocol structures and efficient decisions-making systems in place, quality of overall operations also improve.
- **Reduced Reimbursement Issues** - fewer human errors mean fewer denied claims.

Additional features:

- Make the best possible dispatch decision using the response determinant of ProQA in conjunction with the recommend feature of the map based Sweet-CAD.
- Optimize your response using the attached data feature of Sweet-CAD to enhance the Post-Dispatch and Pre-Arrival Instructions of ProQA by allowing dispatchers to view facility blueprints or SOP plans.
- Interface structure is flexible to cater to the needs of individual agencies.
- Protocol structure combines complaint information with priority indicators to identify the best dispatch destination and match the assistance needed for the incident.
