

Sweet-Field Data

DATA SHEET

Sweet-Field Data is an Emergency Medical Services (EMS) patient care reporting software program. It effectively and securely captures and tracks all scene and inter-facility transfer data, creating a professional medical/legal patient care report (PCR), with added emphasis on medical necessity requirements.

Features:

- Designed to document patient care AND critical information needed by the billing department
- Designed to interface seamlessly with Sweet-Billing reducing data entry required in the billing department
- Patient database - eliminates double data entry by field personnel when treating 'frequent flyers'
- Single System Administration' - administer Sweet-Billing and Field Data from one common interface.
- Spell Check - all 'scrollable free-text' fields include spell-check functionality; associated dictionaries include Medical Terminology and List of Medications
- Link Documents - link documents and/or hyperlinks in Patient Comments, Call Comments and Collection Notes (please contact your sales rep for pricing information for this add-on module)
- Field Data Run Types - customize required fields and defaults to simplify remote user data entry.
- Required fields function -- identifies fields of information that are required for the call and patients that have not been answered
- Document patient refusal with electronic signature capture
- Security features control viewing and editing rights for call records on Remote and limit access to only those personnel having a business need to do so for HIPAA compliance
- Remote unit data entry form adapts based on 'Run Type' and documented patient condition

- Document patient care for multiple patients on the same call
- Capture electronic signatures of crew members, patients and receiving healthcare providers
- HL7 data transfer standard opens possibility of sharing data with other data systems
- Comprehensive Report Generator - provides the ability to easily create both internal and external operation-based evaluation reports, including QA reports, as your needs dictate
- Scrollable user interface and "jump" buttons provide logical orientation during the data entry process
- User-definable pick lists accommodate multiple selections to speed data entry
- Print professional patient care reports

Benefits:

- Improve documentation of patient care
- Reduce data entry in the billing department
- Reduce time in accounts receivable through better documentation
- Improve agency operations by analyzing performance information
- Improve patient care by analyzing crew member performance
